Summary

Hi, I'm @vdsirotkin

I'm currently working at JustPlay as Sr. Backend Engineer

I'm interested in Kotlin JVM, Java, Spring, Reactor, Netty and tons of other cool stuff, including many DevOps tools:)

I love coding in all of it's representations - backend, frontend, devops. I have several pet projects, where i'm usually experimenting with some new technologies. Also, i sometimes contribute to opensource projects, which are used in my work (logback, for example). Please feel free to check my github profile!

In real life i love doing sports (ping-pong, soccer, skiing, skating, fitness) and travelling.

Experience

Senior Backend Engineer

JustPlay

Jan 2024 - Present (1 month)

Senior Backend Developer

Mynd

Sep 2021 - Dec 2023 (2 years 4 months)

At Mynd, I worked on the Onboarding project. It was aimed at encapsulating the user experience for both internal and external users, with the goal of streamlining the process of gathering estate information into the back office system. My role in the project involved implementing automations to speed up and smooth the user experience, both for internal and external users. The implementation of these automations helped to simplify the process of gathering and saving information, making it more efficient and user-friendly. The end result was a system that provided a better user experience for all stakeholders, both internal and external, resulting in improved efficiency and productivity.

In August 2022 I was moved to the Workflow Engine project. The Workflow Engine project is built on Camunda and fully integrated into the back office to provide a seamless user experience. The goal of the project was to enhance the efficiency of internal users by providing clear and relevant tasks through the smart use of automation.

As a developer, I am responsible for working on the back-end components, utilizing technologies such as Kotlin, Guice, Jersey, Amazon MariaDB, SQS, SNS, and Camunda. Additionally, sometimes Icreate end-to-end tests using CodeceptJS to ensure the functionality of the system.

▼VTB Solutions Architect

VTB

Sep 2019 - Sep 2021 (2 years 1 month)

Team-leaded small team of 5 people (me, 2 java devs, 1 system analyst and 1 autotester). Developed lots of core solutions for new microservice platform for VTB Online, such as starter libraries, bank's BOM, cross-system dictionaries service, user-settings service, feature toggles and many others. My main project was the project called "Smart Form" - brand new function for VTB Online, which allows users to fill in small credit form and receive cash credit online in ~5 minutes. This project contains 30+ microservices powered by our core solutions. My role was decomposing business task into microservices, making architectural decisions about cross-service communitation, designing DevOps pipelines, communication with support department, hotfixing after release and more. Also, i've developed support console for this service using ReactJS.

Programming stack: Kotlin, Java, Spring Boot 2.*, PostgreSQL, Redis

Main IT engineer

Sberbank-Technology

Aug 2014 - Sep 2019 (5 years 2 months)

Worked on projects:

- * SberDisk file cloud storage for employees
- * Sberbank Messenger messenger in Sberbank Online application
- * Superapp superapp for sberbank online application, integrated with 5 data providers.
- * DMS distribution management system. This project was designed for managing and distributing mobile apps inside of organization, it is actually an out-of-box solution that can be installed and used anywhere.

In every project i've participated in backend and frontend development. On SberDisk i've designed and implemented into production administration console from scratch by myself, while i've been the only developer on the project.

While working on Sberdisk and Superapp i've designed and developed core parts of the projects. Programming stack: Java, Spring, JPA, Hibernate, Mybatis, JavaScript, React DB: PostreSQL, Redis Tools: Intellij IDEA, Docker

Education

Bauman Moscow State Technical University

Bachelor's degree Sep 2013 - May 2017

Skills

Kotlin • Java • Spring Framework • Maven • Git • MySQL • PostgreSQL • Linux
