Financial Sector
• Banking

Main architect

Team-leaded small team of 5 people (me, 2 java devs, 1 system analyst and 1 autotester).
Developed lots of core solutions for new microservice platform for VTB Online, such as starter libraries, bank's BOM, cross-system dictionaries service, user-settings service, feature toggles and many others. My main project was the project called "Smart Form" - brand new function for VTB Online, which allows users to fill in small credit form and receive cash credit online in ~5 minutes. This project contains 30+ microservices powered by our core solutions. My role was decomposing business task into microservices, making architectural decisions about cross-service communication, designing DevOps pipelines, communication with support department, hotfixing after release and more. Also, i've developed support console for this service using ReactJS.

Programming stack: Kotlin, Java, Spring Boot 2.*, PostgreSQL, Redis

Sberbank
Moscow, www.sbrf.ru
Financial Sector
• Banking

Main engineer

Worked on projects:
* SberDisk - file cloud storage for employees
* Sberbank Messenger - messenger in Sberbank Online application
* Superapp - superapp for sberbank online application, integrated with 5 data providers.
* DMS - distribution management system. This project was designed for managing and distributing mobile apps inside of organization, it is actually an out-of-box solution that can be installed and used anywhere.

In every project i've participated in backend and frontend development. On SberDisk i've designed and implemented into production administration console from scratch by myself, while i've been the only developer on the project.

While working on Sberdisk and Superapp i've designed and developed core parts of the projects.

Programming stack: Java, Spring, JPA, Hibernate, Mybatis, JavaScript, React
DB: PostreSQL, Redis
Tools: Intellij IDEA, Docker

Sberbank Technologies

Moscow, sber-tech.com/

IT, System Integration, Internet
   • System Integration, Technological and Business Processes Automation, IT Consulting

Leading engineer

Worked on projects:
* QA system for direct line event
* Middleware services for Sberbank Online Europe
* Incident conference service for bank support.

My main responsibilities were developing new features in existing projects, bugfixing, optimizing DB queries.

All of them are used production till nowadays.

Programming stack: Java, Spring, JPA, Hibernate, Mybatis, JavaScript, React.
DB: Oracle, MSSQL, PostreSQL
Tools: Intellij IDEA, Docker

Education

Bachelor

2017

Bauman Moscow State University

About me

I love coding in all of it's representations - backend, frontend, devops. I have several pet projects, where i'm usually experimenting with some new technologies. Also, i sometimes contribute to opensource projects, which are used in my work (logback, for example). Please feel free to check my github profile!

In real life i love doing sports (ping-pong, soccer, skiing, skating, fitness) and traveling.
